

GORILLAN PROVIDES EXPERT TECHNICAL SUPPORT

GorilLAN provides a wide range of information technology consulting, business process management, financial logistics, and engineering services with a strong emphasis focused in the health care industry.

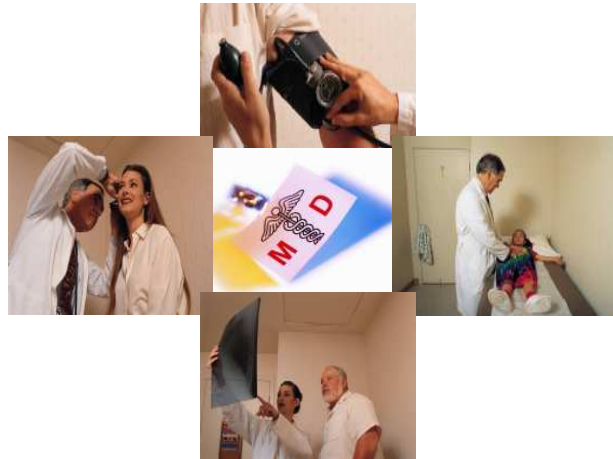

Solid Information Architecture is an important element for continuity in health care. GorilLAN has expert technicians to help you develop a system that meets the specific needs of health care providers.

GorilLAN staff is trained in a variety of software programs so we are able to help you meet the health care industry's need for scheduling, billing, and reporting.

We can support the programs you use to maintain the integrity of your practice so you can confidently provide the highest standard of care to your patients.

Let GorilLAN take care of your information system while you take care of your patients.

GorilLAN's provides a strong commitment to support Information Systems that allow our clients to focus on achieving leadership in the health care industry.

Excellent service provided in a fiscally and socially responsible manner.

ON-SITE MANAGEMENT

GorillAN has a unique approach when it comes to providing professional management of Information Systems for health care providers. Our expert staff can provide service at your facility on a weekly or monthly basis to keep your systems running, prevent problems, and maintain security. A well maintained information system gives you the added assurance that you will have the security and integrity needed to keep your facility functioning at peak proficiency.

SPECIALIZED TRAINING

Depending upon the specific needs of your business, we will either train or manage any training required to improve the information systems infrastructure of your health care facility. Training can include operating systems, applications and system administration.

GORILLAN'S INFORMATION SYSTEMS

Desktop and Network Support includes: information system planning and growth management strategies, the diagnosis and resolution of problems, system software administration, integration and disaster avoidance.
